

Health and Homelessness Coordinator Archetype

This archetype guide is intended to provide role clarity for Health and Homelessness Coordinators working in their communities. Use this guide as a north star for your system improvement work.

The responsibilities and theory of execution are a compilation of multiple community and BfZ coach perspectives and is therefore a *generalized* representation of Health and Homelessness Coordinator work - your community's specific needs and the responsibilities/theory to address those needs will most likely be different! Instead, this guide can serve as a **north star** for Health and Homelessness Coordinators as they work to improve systems in their communities.

If you have comments or feedback on this guide, please add a card to [this EasyRetro board](#).

Job Description

Summary

Health and Homelessness Coordinators leverage and promote continuous quality improvement best practices to actively reshape community processes and behavioral norms. They co-develop a shared vision for success across the community, provide the project management support to actualize that vision, and embed Collective Impact principles into community processes to ensure system-level gains are sustained. They establish and maintain critical communication and knowledge-sharing lanes between end users, providers, the community as a whole and the broader systems that touch the HRS.

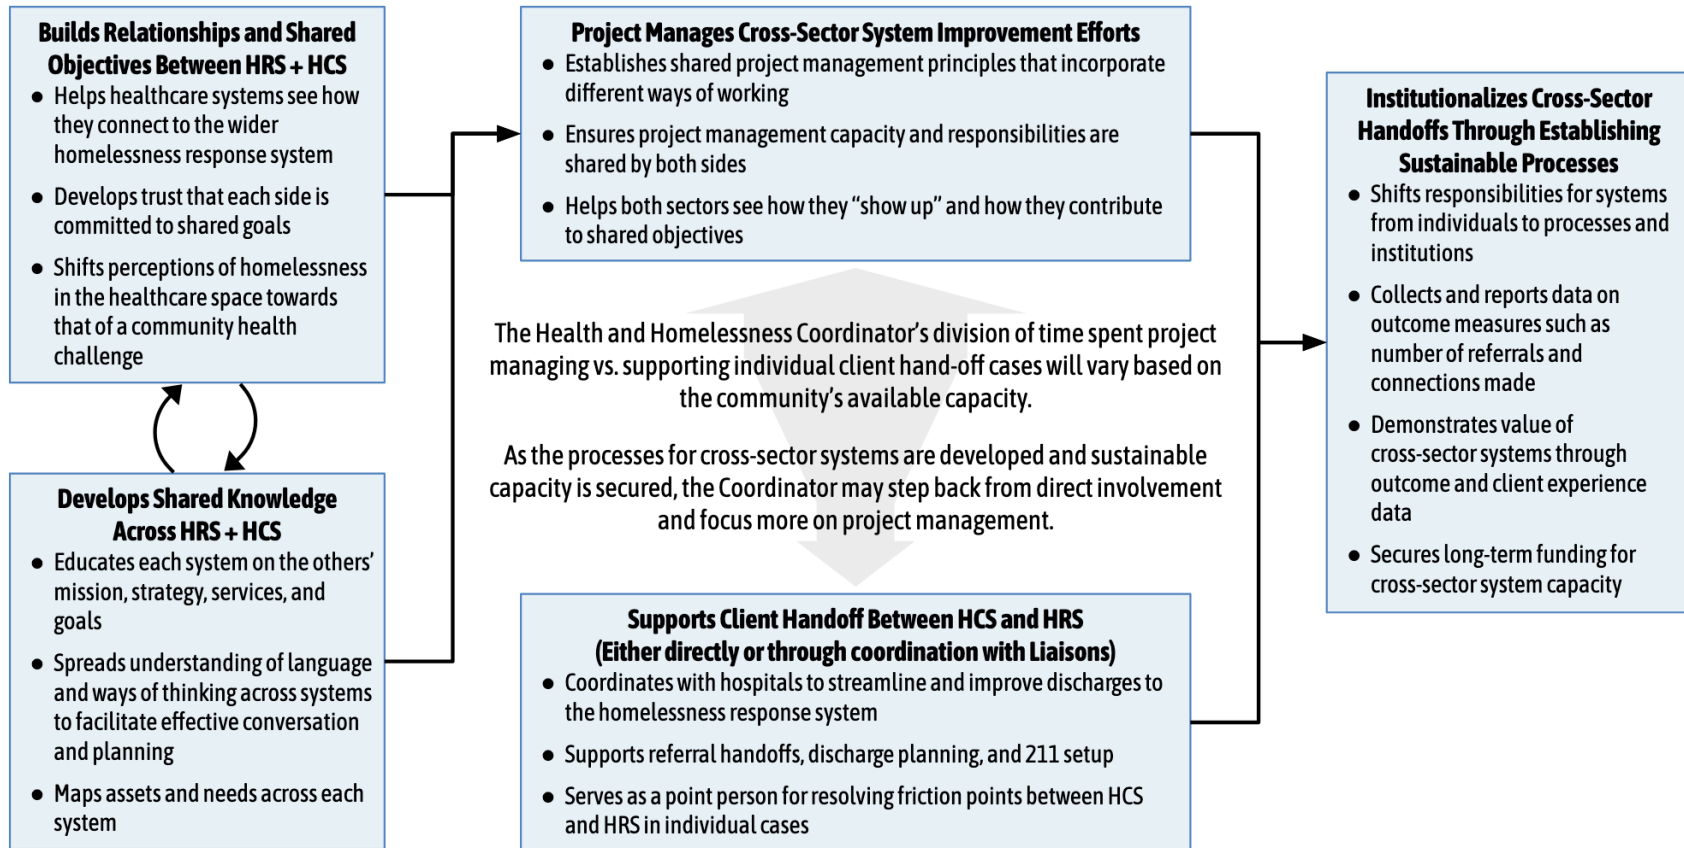

Responsibilities

- **Builds and maintains strong relationships between the local health system and the CoC** through educating each partner system on sector-specific language, systems, stakeholders, and processes
- **Helps the healthcare system see themselves as a part of a community's response to homelessness** - spreads the idea of "our clients" vs. "my/your clients" across

sector lines and shifts perceptions towards homelessness as a community health challenge

- **Maps the resources and needs of each system** to educate each system on the others' available resources and to make connections across systems between needs and resources
- **Develops shared aims and measures across sector lines** to operationalize shared objectives into targets to be addressed through joint efforts and to track progress towards success
- **Fosters data transparency between the healthcare and homeless responses systems** by facilitating data sharing agreements and regular touchpoints
- **Supports client handoffs between the healthcare and homelessness response systems** either through direct action or through coordinating with health and homelessness liaisons
- **Project manages or supports the project management of homelessness response and healthcare system improvement efforts** such as facilitating cross-sector case conferencing or streamlining discharge planning systems and ensures that each side understands how they show up
- **Secures sustainable capacity and infrastructure to support homelessness response and healthcare systems** to ensure system operations and gains are not tied to an individual
- **Collects and analyzes evidence of system effectiveness to demonstrate the value of cross-sector systems** and to advocate the institutionalization of those systems through sustained funding

Generalized Theory of Execution

Theory of Execution Summary: Health and Homelessness Coordinators develop the connective tissue between a community's healthcare and homeless response systems. They start by developing relationships between the HRS and HCS, helping each understand each others' language, services, and resources - developing a shared sense of community and measurable objectives helps deepen these relationships and is necessary for cross-sector projects. The HH Coordinator then leads the deployment of discharge handoffs between the HCS and HRS. Depending on a community's staffing capacity, the Coordinator may split their time between being directly involved in many individual handoff cases themselves and performing project management duties. Ultimately, the Coordinator works to institutionalize these systems by demonstrating measurable system-level improvement, with the end goal of securing dedicated resources and capacity.

Competency Model

Competency Map

This model maps out which competencies contribute to successfully executing each Health and Homelessness Coordinator responsibility. Use this to identify where to focus your professional development energy to move specific barriers in your work.

Practical Application generally refers to applying a skill within your own team or organization - for example managing an internal outreach coordination strategy. **Strategic Application** generally refers to being able to apply a skill across disparate stakeholder groups - for example, aligning outreach and enrollment processes across community providers. These represent two levels of proficiency because applying a skill without the benefits of shared language, ways of thinking, or strategic aims (as is often the case when working across stakeholder groups) requires a deeper mastery of the underlying concepts of that competency.
